ATD values are from the locked v2R engine, not the separate 10K fantasy TD estimates. Dash = no frozen production ATD or market price.
Baker Mayfield OUT and excluded; Jalon Daniels projected starter. Jonathan Mingo QUESTIONABLE. Final actives/inactives pending.
Market lines are an earlier Oct 7 snapshot, not live odds. Confidence is evidence quality, not a change to scoring probability.

Probability and Confidence are independently frozen. Market edge = model ATD - best available DK/FD implied probability.

Market prices are Oct 7 early snapshot, not live. Missing lines remain blank. Injury/inactive players are not projected.

The original approved game sheet is reproduced as page 1 without changes. This ATD page separates the scoring lens from traditional props.

* P(hit) is a parametric proxy from frozen means (not replayed 10K draws and NOT validated/calibrated). Edge = proxy P(hit) - DK implied probability.
Proxy: normal pass yards; gamma rush/receiving yards; negative-binomial catches; Poisson passing TDs. No market-based changes to model projections.
Ranked by provisional raw edge, not a verified betting advantage. Prices are an Oct 7 12:38 ET capture; recheck before wagering.
