* ATD: Offensive rushing/receiving touchdown probability from v0.9 draws. Passing TDs do not count. Research output; R3 research probability preserved for comparison; experimental v2R adaptation and conviction are on page 2. No market edges.

Experimental adaptation, not recovered end-to-end production. R3 simulation ATD is the new upstream baseline; recovered v2R high-value formulas then apply. Current projected volume, Weeks 1-5 opportunity/defense data and documented role classes feed conviction. No second weather or TD-inventory multiplier is applied.

Conviction = Composite / 10 x adapted ATD probability x 100. Conviction ranks are comparative scores, not calibrated confidence or betting value. Slate ranks compare all 326 working players; input support describes evidence, not confidence. All prior player flags remain in the exports and clearance notes.

Historical high-value access may lag a changed role. Players flagged with no current-team HV history retain their R3 baseline ATD. Alternative cases are unweighted and each is ranked against a full slate with only that matchup replaced. The original environment model remains experimental.

SCENARIOS, CLEARANCE + COVERAGE

WEEK 6 | DAL vs GB | Current-source review completed | Final-lock decisions remain time dependent
